3. Level/year at which this course is offered:	5/3
4. Course general Description	
<p>This course introduces the fundamental concepts of the field of real numbers, finite and infinite sets, countable and uncountable sets. Also, it covers the basic topology of real numbers such as neighborhoods, open and closed sets, compactness and Heine-Borel theorem. The course provides knowledge of convergence for sequences and Cauchy sequences. Finally, limits, continuity, differentiation and basic theorems both in the limit, continuity and derivation are demonstrated.</p>

Integration Calculus (112Math-3)	
6. Co- requirements for this course (if any): None	
7. Course Main Objective(s)	
<p>The main objective of the course is to study the topology of real numbers, sequences and Cauchy sequences, limits, continuity, uniformly continuity, differentiability and related concepts.</p>
